

Pusher seal — Common size / specification table

Common shaft diameter (d)	Typical catalog range / example series
12.7 mm (0.500") - 139.7 mm (5.500")	Flowserve QB / RO / RA pusher families list sizes 12.7 → 139.7 mm (0.500" → 5.500") for various models.
~16 mm - 100+ mm	Many “off-the-shelf” cartridge sizes cover industrial pump frames.
Custom / extended ranges	High-duty or API cartridge pusher seals are offered in extended diameters and dual arrangements for API 682 applications — consult vendor TDS for exact size matrix.
Inch & metric availability	Manufacturers publish both metric and imperial size charts (e.g., 0.5", 0.75", 1", 1.25", 2", 3", etc.); B2B buyers should provide shaft Ø (mm & inch) and stuffing-box ID for correct match.
